

[Detect Metal In The UK And Australia](#)

Thanks to physicists, the theory of electromagnetism has been discovered and its principles are now being put to good use in the form of metal detectors.

At the basic level, metal detectors are pretty simple. What it has is a coil that produces alternating current that in turn produces a magnetic field that will interact with hidden metal which is how metal is detected.

If you happen to be looking for these wonderful gadgets, you may want to try what is dubbed as Europe's Premier Detecting Specialist.

You can search for "Joan Allen online" and from there you can browse through their extensive metal detector offerings. You can choose by brand, metal detector type and if you want, you can easily compare prices to ensure yourself of a really good buy. Joan Allen is pretty dependable because they have been around, distributing metal detectors in the UK since the 1960s. With their extensive years of experience you can depend on their reliability and know how about the subject of metal detectors.

They are considered one of the leaders when it comes to metal detectors in the UK. They offer expert service and customer satisfaction in terms of turn around of orders. Their many customers throughout the years can vouch for this. You are also sure to find the metal detector you are looking for from their extensive offerings and they can surely find you one to suit your needs, specifications and budget.

If you choose this metal detector service provider from the UK, you can be sure that your orders will arrive securely because they assure that deliveries arrive on the next working day upon placement of order within the UK. Not only that, their deliveries are insured to manage risk that come with any usual delivery.

If you are not yet a metal detecting veteran and may be in need of professional help, you can also count on them to be able to give you the right metal detecting advice by any communication means. You can also opt to learn more about metal detecting and what are the best metal detectors to use for certain needs by going through their publications and literature on the subject.

If online shopping and browsing is not your style, you can decide to visit their showroom and check out their numerous and varied stocks of metal detectors for all your detecting needs in the UK.

Among the world's top notch metal detectors, an electronics company down under has made its mark in the industry. Minelab Electronics Pty Ltd is an Australian company that specializes in electronic devices and which include an array of detection equipment for consumer and industrial usage. Their products have been used extensively by both the military and industry mining projects across the globe.

Minelab is dedicated in providing the best technologies for its clients. They have incredible people working behind the scenes to ensure that they can create and deliver products with exceptional quality.

They always keep their customers in mind and will always try to provide all the needs of their customers and business partners. The company is guided with philosophies like integrity and respect for people, good communication between them and their clients, and a constructive working environment. It is no wonder, therefore that the company is able to offer various innovative solutions.

Compared to some of the companies in the industry, Minelab is still very young. The company began in 1985 but since then, the company has aspired to be a leader in the field of metal detection.

Thanks to the highly competent research, engineering and development teams, the company was able to immediately break into a market that was dominated by industry giants that have more than 20 years of experience tucked under their belts. It was no easy feat, but the Minelab persevered until it reached the status that the company enjoys now.

Minelab today is known manufacturer and distributor of metal detection equipment and technologies in Australia, Europe and the United States. It also has earned the ISO 9001 Quality Endorsed Company level which ensures that their products are of highest quality.

The company is divided into divisions. This is to make sure that every target consumer will receive the company's utmost attention. Minelab Countermine, for example, is a division wholly dedicated in creating the best technology in land mine detection. Their products have been used by humanitarian and military organizations extensively in service of de-mining communities affected by conflicts.

The Minelab Consumer, on the other hand, provides the world market with high quality gold, jewellery, coin and treasure detecting products. Their metal detectors have been designed to get optimum results regardless of ground terrain or conditions.

Another division of the company is the Minelab Security division which focuses on making superior detectors and scanners for security purposes.

The MF-1 Hand Held Security Scanner, for instance, is fast becoming the "in" thing in portable security detection and is beginning to be popular in domestic and international airports, for law enforcement and for security screening purposes.
