

[HHO Generators For Fuel Benefits](#)

A HHO gas devices are a new innovative way to improve gas mileage. These gas devices are easy to make at home and can be made from many items found around a shop or around town in you local hardware or automotive store. Home made HHO gas devices can easily be built and can be replicated for other cars and trucks. Your car or truck will be a water hybrid of sorts running on gasoline and water. This also works well with diesel fuel on larger engines it may be required to have more than one of these HHO gas devices.

HHO gas kits produce hydroxy gas or browns gas through a process called electrolysis. The HHO fuel cell is filled with water and a catalyst such as baking soda or bread soda added to the water helps produce the gas when electrical current is produced. This current is supplied from you vehicles battery. When the current is passed through the plates that are usually stainless steel HHO gas is produced. Water can hold a lot of energy and this is evident from the hydroxy that is produced through the process of electrolysis.

A HHO gas devices produce a gas that helps assist in combustion. This gas is then inserted just before the air intake or intake manifold. This helps mix the hydroxy before the combustion cycle. This modification is simple and can be done at home. It has been suggested that this technology has been around for 40 or more years. It is also known as hydroxy or Browns gas and it is experimental in a way that many are using it for any internal combustion engine to help boost efficiency and power.

When you review fuel saving devices that may help increase gas mileage consider adding a HHO gas kit. HHO gas kits require very little room under the hood of your car or truck and can be used on both diesel and gas burning engines and the savings can be substantial when you improve gas mileage.

Free HHO gas kit plans can be found on the internet but they sometimes miss a few important points. There is an old adage you get what you pay for. What may be missing is information to deal with an oxygen sensor. The sensor on the exahst determines if the air to fuel mixture is correct and will adjust as needed. With HHO gas there will be more oxygen exiting the exhaust so therefore more gasoline will be supplied to the air fuel mixture reducing mileage. This device helps avoid this situation so you will have the best mileage possible. Many free HHO gas kit plans do not include this information.

Many people are willing to spend several dollars for a gasoline additive that helps keep carbon from building up and possibly increase gas mileage. HHO gas is something that will could help carbon buildups from forming and help keep your engine clean. When you motor is clean of carbon buildups it runs coolers and smoother and helps extent its life.

HHO generators could increase gas mileage efficiency and reduce tail pipe emissions. We all want a greener planet and less pollution. When you increase you mileage with an HHO generator you could also see more horse power and a smoother running and quieter engine. Some have seen a typical boost in mileage from 16 to 40% and some are seeing much higher.

A home made HHO generator or fuel cell is easy to build when you have a good set of detailed plans. When you know how to build a HHO gas generator you can build it for several vehicles and possibly do it for under 100 dollars. With detailed step by step instructions and pictures this would make a nice weekend project. Increasing gas mileage or miles per gallon is just one of the many benefits that an HHO generator can supply.

Now HHO gas devices may not be for you. Some people are willing to spend hundreds even thousands of dollars for installed HHO gas devices. Home made HHO fuel cells can be made and installed as a day project by you typical handy person. I have to stress the following points again. Free HHO plans do not always give you all the information you need. The best HHO plans will give you step by step instructions with photos on how to install your home made HHO fuel cells.
