

[What to Consider Before Purchasing High Speed Broadband Internet?](#)

If you've ever waited for dial-up to connect you and then tried to download a graphics-rich webpage, the need for broadband access becomes immediately clear. However, even with that said, in many cases, people will resist leaving dial-up because of cost concerns, thoughts that going to high-speed will be too much of a hassle and too complex, and a myriad of other myths about getting robbed through the Internet.

When it comes to money, many broadband providers like "Comcast" are running a number of "Comcast Specials" to help ease the transition from a \$9.95 a month service to the higher amount paid for broadband. They will offer lower introductory rates to allow a person to "try" the service. 95% of the people who try broadband will stick with some kind of high-speed access due to the convenience, speed and just plain fun of surfing at light speed.

Okay, so you realize that surfing the web with dial-up is no longer an option, and you know that you will have a much more rewarding experience with a high speed internet connection. However, the challenge to you moving forward may be the confusion of exactly who to choose for your service. Let's face it, companies like Comcast are advertising daily for you to try their Comcast Specials on radio, television and of course online. So, who do you believe?

In addition to being affordable, high speed internet service providers like Comcast are also including in their packages, some of the very best security options available today. With a faster connection you can easily have all of your virus and spam protection software updated. With the old style 56k modem, this was unheard of.

When it comes to money, many broadband providers like "Comcast" are running a number of "Comcast Specials" to help ease the transition from a \$9.95 a month service to the higher amount paid for broadband. They will offer lower introductory rates to allow a person to "try" the service. 95% of the people who try broadband will stick with some kind of high-speed access due to the convenience, speed and just plain fun of surfing at light speed.

The next thing you should pay attention to when choosing between service providers is the level of speed you need from an internet connection. While it's clear that everyone in this day and time needs something more than a dial-up connection, it is not as clear as to what that would mean. While it may be cool to have the fastest internet on the block it may not be necessary.

If you go with DSL, there is another security layer added in that broadband DSL users have their own private telephone lines connected to their service provider. If you use broadband, and security is an issue, it is very easy to firewall and cable or hardwire your connection to the Internet, increasing the speed of connection (wireless connections until recently ran at 50-75% the speed of hard wire cable connections).

Since its inception, wireless connections have become more and more secure however for the ultimate mark of a truly secure connection, a cable hook up appears to be the best. The best part about upgrading your internet is that you are literally just one click away from an online experience you will never forge
